WEBSITE DESIGN REPORT

Food Ordering Website • Healthy Food & Nutrition Website • Fitness Center Website

1. Introduction

This report presents three website design projects: Foodie, Healthy Life, and PowerFit Gym. Each website is designed to provide information in a clear, attractive, and user-friendly way. The pages use organized sections, navigation menus, cards, headings, images, and buttons to help visitors find the information they need. The projects demonstrate how HTML and CSS can be used to create structured and visually appealing websites.

2. Objectives

The main objectives are to create easy-to-use web pages, arrange content in meaningful sections, present information with suitable colors and layouts, and make the pages usable on different screen sizes. The projects also demonstrate common website elements such as navigation links, information cards, pricing tables, schedules, and forms.

3. Food Ordering Website — Foodie

The Foodie website is designed for a restaurant or online food-ordering service. Its home section welcomes visitors with a food-related banner and an Order Now button. The menu section displays food items such as cheese pizza, chicken burger, chicken biryani, and ice cream, along with descriptions and prices. A special-offer section highlights a discount coupon, while the customer-review section shows feedback from customers. The simple navigation menu helps users move between Home, Menu, Offers, and Reviews.

Main features

• Attractive food-themed home page
• Menu cards with food names, descriptions, and prices
• Special offers and coupon information
• Customer reviews and ratings
• Clear navigation and prominent order buttons

4. Healthy Food & Nutrition Website — Healthy Life

The Healthy Life website shares information about nutritious food and healthy eating habits. The categories section groups foods into salads, fruits, vegetables, and breakfast. The recipe section presents dishes such as fresh vegetable salad, an oats breakfast bowl, and vegetable soup. Each recipe includes a short description, ingredients, estimated calories, and preparation time. A daily meal-plan section gives simple examples for breakfast, lunch, snacks, and dinner. Healthy eating tips encourage visitors to drink water, eat a variety of fruits and vegetables, and choose balanced meals.

Main features

- Food categories and recipe cards
- Ingredient lists and estimated calorie information
- Preparation-time details
- Daily meal-plan suggestions
- Healthy eating tips and a clean green color theme

5. Fitness Center Website — PowerFit Gym

The PowerFit website introduces a gym and its fitness services. The home page uses a bold design to welcome visitors and encourage them to explore membership options. The trainer section introduces coaches and their areas of training. Workout programs include strength training, cardio training, yoga and flexibility, and boxing fitness. The facilities section lists equipment and services available at the gym. Membership cards compare Basic, Standard, and Premium plans with monthly prices and benefits. A weekly class schedule displays class names, timings, days, and trainers. The registration form collects basic contact details and allows visitors to select a workout program and membership plan.

Main features

• Trainer profiles and workout programs
• Gym facilities and equipment information
• Membership plans and monthly prices
• Weekly class schedule
• Registration form for interested members

6. Technologies Used

HTML5: Used to organize the page structure, headings, paragraphs, navigation, cards, tables, images, and forms.
CSS3: Used to style colors, fonts, spacing, backgrounds, borders, shadows, layouts, and hover effects. CSS grid and flexible layouts help arrange content across different screen sizes.
Responsive design: Helps the layout adapt to desktop, tablet, and mobile screens. Images used for banners and cards should be stored with the project and linked using valid file paths.

7. Benefits of the Projects

These projects provide practical experience in website structure and visual design. They show how content can be divided into clear sections and how colors, typography, spacing, and cards can improve readability. The projects also demonstrate common real-world website features, including product menus, recipe information, pricing comparisons, schedules, and forms.

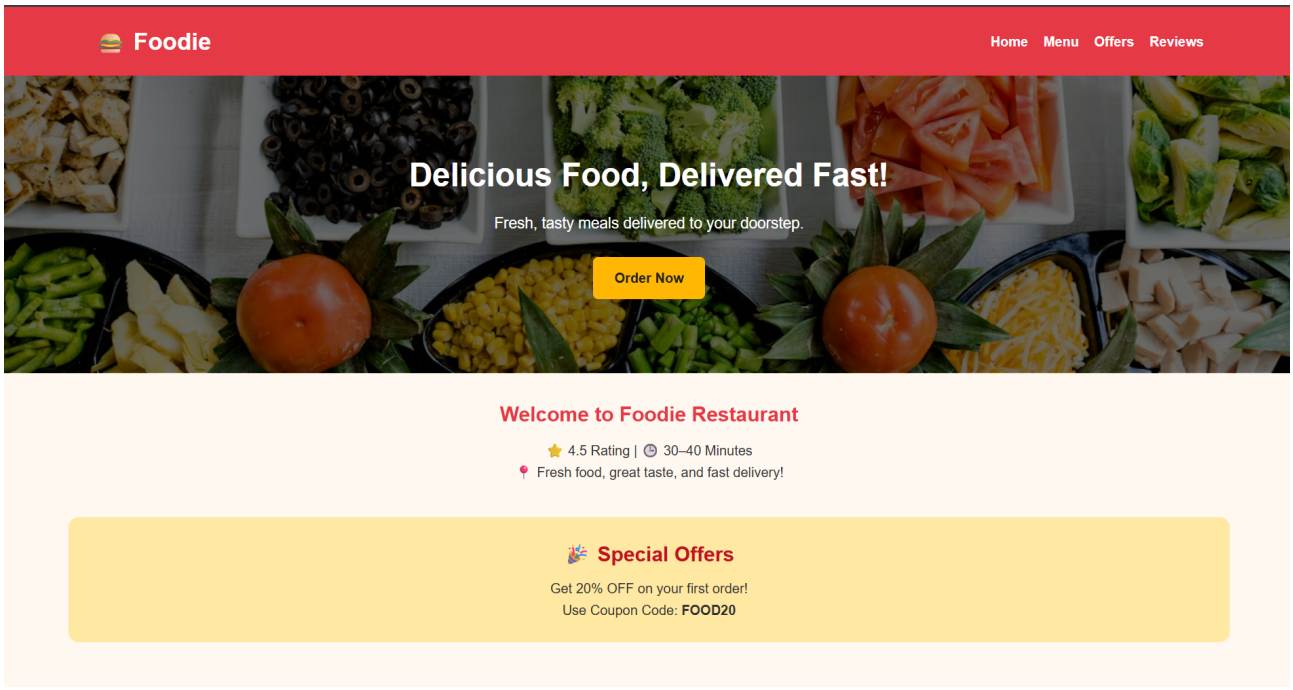

8. Conclusion

The Foodie, Healthy Life, and PowerFit Gym projects demonstrate three different uses of website development. Foodie focuses on food menus and offers, Healthy Life focuses on nutrition and recipes, and PowerFit focuses on gym services and memberships. Together, they show how HTML and CSS can be used to create organized, attractive, and user-friendly websites. Future improvements could include working order or registration processing, search and filter options, and a database for storing user details.

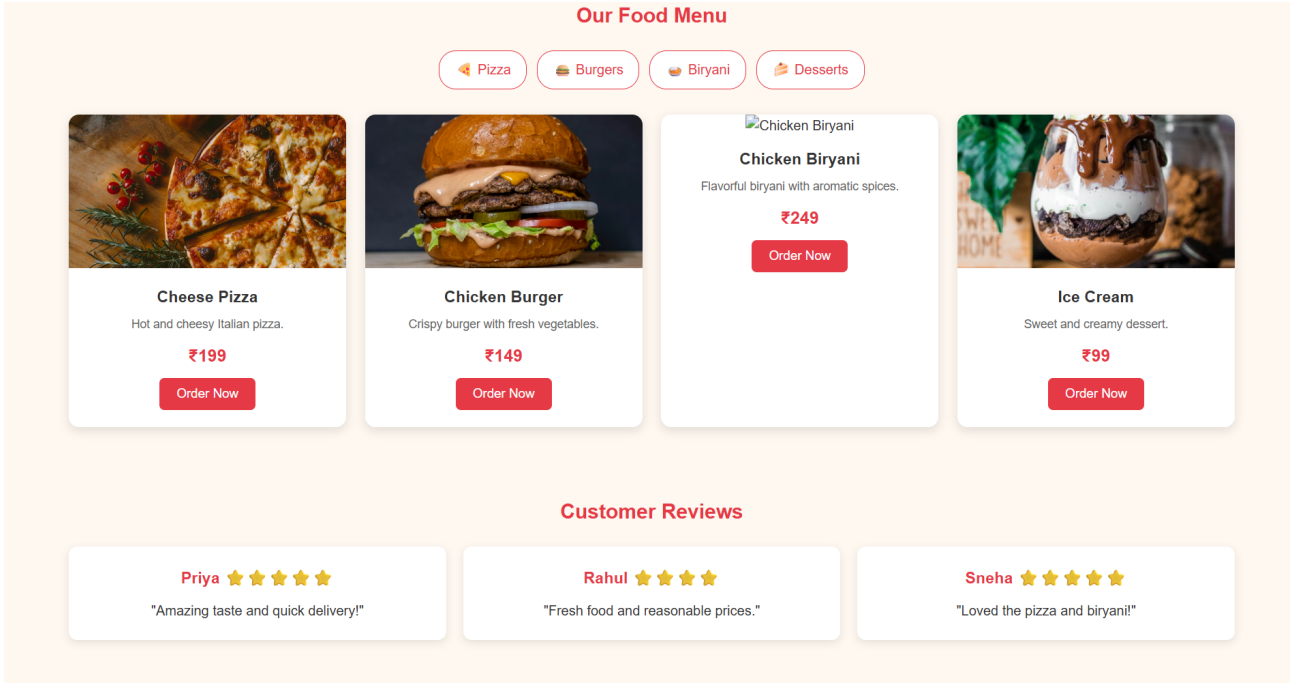

9. Website Screenshots

The following screenshots provide visual documentation of the website designs described in this report.
